POSITION PAPER

IBAD-MUN 2026 • IBA Community College Dadu • 13 November 2026

Delegate	Ms. Mahnoor Imdad
Representing	Socialist Republic of Viet Nam
Committee	United Nations General Assembly (UNGA)
Agenda	Strengthening global actions and international cooperation to combat climate change
School	_____

I. Introduction

Viet Nam is a country with a long coastline, two great river deltas and a fast-growing economy. These features make it one of the nations most exposed to climate change. Rising seas, saltwater intrusion, erosion, floods and stronger storms already threaten homes, farms and lives. The United Nations Development Programme has warned that about 40 percent of the land of the Mekong Delta, Viet Nam's rice bowl, could be inundated by 2100. The delegation of Viet Nam therefore believes that climate change is a shared emergency that demands shared action.

II. Past Involvement

Viet Nam is a party to the Paris Agreement and has repeatedly raised its ambition. At COP26 in 2021, our Prime Minister pledged net-zero emissions by 2050. Viet Nam also joined the Global Methane Pledge and announced that it would stop building new coal power plants. The updated Nationally Determined Contribution (2022) aims to reduce emissions by up to 43.5 percent by 2030 compared with the business-as-usual scenario, with international support, and the National Climate Change Strategy to 2050 aims for emissions to peak by 2035. Viet Nam has also entered a Just Energy Transition Partnership with development partners, and has dedicated large national budgets to adaptation. In 2023 alone, more than four trillion dong was allocated to fight erosion in the Mekong Delta.

III. Current Problems

Despite these efforts, three challenges remain. First, adaptation is costly: protecting deltas and coastlines requires money that developing countries struggle to find. Second, moving away from coal needs new grids, clean technology and new jobs for workers. Third, climate finance is often slow, complicated to access, and smaller than promised. Viet Nam believes that fairness is essential: all countries must act, but countries that have emitted the most for the longest time should lead in providing support.

IV. Proposed Solutions

The delegation of Viet Nam proposes that the General Assembly:

1. **Call upon** developed countries to deliver their climate finance commitments on time, with simpler access procedures and more grants for vulnerable countries.
2. **Encourage** Just Energy Transition Partnerships that combine finance, technology transfer and retraining for workers.
3. **Support** adaptation programmes for deltas and coasts, including early-warning systems, mangrove protection and climate-smart, low-carbon farming.
4. **Request** annual public reporting on national progress and on finance delivered, so that all states are accountable.

V. Conclusion

Climate change does not respect borders, and our response must not either. Viet Nam is ready to do its share and calls upon all member states to turn promises into action.

Respectfully submitted,
Ms. Mahnoor Imdad
Socialist Republic of Viet Nam
