POSITION PAPER

IBAD-MUN 2026 • IBA Community College Dadu • 13 November 2026

Delegate	Mr. Aman Mustafa
Representing	United Arab Emirates
Committee	United Nations General Assembly (UNGA)
Agenda	Strengthening global actions and international cooperation to combat climate change
School	_____

I. Introduction

The United Arab Emirates is a country built on energy, and it understands that the world must both keep its energy secure and bring emissions down. The delegation of the UAE believes that climate action succeeds when it is practical, inclusive and based on cooperation between governments, industry and finance. Every country and every sector must be part of the solution.

II. Past Involvement

The UAE was the first country in the Middle East and North Africa to commit to net-zero emissions by 2050, and it has set a target of reducing emissions by 40 percent by 2030. The UAE plans to invest more than 163 billion US dollars in clean and renewable energy. In December 2023, the UAE hosted COP28 in Dubai, where nations adopted the UAE Consensus. For the first time, a global climate agreement called for a transition away from fossil fuels in energy systems in a just, orderly and equitable manner, and set goals to triple renewable energy capacity and double energy efficiency by 2030. COP28 also made the Loss and Damage Fund operational. On the finance side, the UAE launched ALTÉRRA, a 30 billion US dollar climate investment vehicle that aims to mobilise up to 250 billion dollars by 2030, including around 5 billion dollars to attract investment into the Global South. In addition, about fifty oil and gas companies joined the Oil and Gas Decarbonization Charter, committing to end routine flaring and reach zero methane emissions by 2030.

III. Current Problems

The agreements of COP28 must now be implemented. The world still faces a large climate finance gap, and developing countries need affordable capital, clean technology and strong electricity grids. Vulnerable states need support to recover from climate disasters. Meanwhile, progress must be measured and reported honestly so that trust between nations grows.

IV. Proposed Solutions

The delegation of the United Arab Emirates proposes that the General Assembly:

1. **Urge** all states to include targets to triple renewable energy and double energy efficiency in their next Nationally Determined Contributions.
2. **Encourage** blended finance models, such as ALTÉRRA, that use public funds to reduce risk and attract private investment to developing countries.
3. **Support** industry decarbonisation, including methane reduction, an end to routine flaring and independently verified reporting.
4. **Call upon** capable states to contribute to the Loss and Damage Fund and to adaptation finance for the most vulnerable.

V. Conclusion

The UAE invites all member states to turn the UAE Consensus from words on paper into projects on the ground, because energy security and climate action must move together, not against each other.

Respectfully submitted,
Mr. Aman Mustafa
United Arab Emirates
